

STEREOTAXIC FRAME

- Digitized stereotaxic frame (one or two arms).
- More precision and repeatability for better experimental results.
- Compatible with electrophysiology experiments.
- Digital arm adaptable to other frames.

- **U-shaped** stereotaxic frame (rotating or not).
- More **freedom of movement**, possibility of surgery or injection from **different angles**.
- One arm or two arms.
- Possible blocking of the base every 45 °.

- **Standard stereotaxic frame with rail.**
- Rat or mouse.
- **More space** to experiment, especially when **using surgical instruments**.

- **80 mm working distance** in each dimension
- Resolution 0.1 mm
- Possibility to **adapt microdrill, camera, syringe pump ...**
